

HOURS OF SERVICE MODULE

Hours of service module

Do you want to have a better grip on your wage costs? Know what a trip actually costs? The CarrierWeb hours of service module registers driver hours accurately down to the last minute. CarrierWeb collects the input from your drivers and automatically registers their activities, linked to locations, times and landmarks. All data are then available via the CarrierWeb Website for your planners at your home base. Accordingly, you always have an overview of how your drivers are spending their time: managing drivers becomes even easier and your costs can be managed even better.

- + **Continuous and complete overview of driver activities**
- + **All remuneration data available in real time**

Advantages

- Always reliable and up-to-date information about driver activities per day, week and month ✓
- Driver activities also available per trip and per vehicle ✓
- Optimal use of available hours ✓
- Better charging of costs to customers thanks to detailed overviews per trip, including waiting, loading and discharge times ✓
- Poor use of times by drivers immediately apparent ✓
- Simple generation of various management reports ✓
- More efficient administration thanks to automatic and real-time timesheets ✓
- Optimal efficiency of wage administration thanks to link-ups with all standard remuneration and TMS solutions ✓

The planning department activates your drivers in real time via the CarrierWeb Website. The great advantage of having an overview of a driver's current activities is that planning can make direct use of any driver hours that becomes available.

CarrierWeb Connector

The CarrierWeb Connector automates all data relating to driver activities and ensures that your entire organisation has direct access to all important information. The CarrierWeb Connector links up with all standard remuneration and TMS packages so that the data are integrated in your organisation in optimal manner.

Digital tachograph

CarrierWeb offers a range of possibilities for the obligations linked to the digital tachograph.

- + remote read-out of driver cards
- + remote read-out from mass memory (in combination with the firm card)
- + real-time access to tachograph data
- + remote evaluation of driving time, e.g. how much longer can a driver continue to drive?
- + data can also be downloaded and stored locally in original format via the CarrierWeb Connector.

Hence, CarrierWeb ensures that you can comply simply with statutory requirements at a distance.

Easy for drivers to operate

The hours of service module is also very easy for your drivers to use. The driver notifies his activities on the screen in the cabin via the touch screen. The driver is obliged to substantiate and specify times of inactivity: loading, discharge, traffic jam, break, attaching trailer, etc. You yourself determine what activities are relevant in your organisation. Because drivers themselves need to enter a minimum of information, it is now almost impossible for errors to be made.

About CarrierWeb

CarrierWeb's vehicle communication and tracking system for trucks, trailers, vans, containers and freight allows you to monitor the status of your vehicles, loads, deliveries as well as driver and engine performance. CarrierWeb automates all data, making the information available for your whole organisation and enabling seamless integration with most standard back-office systems.
